Experience

EY GDS

Bengaluru

Software Engineer

Jan 2026 – Present

- Developing full-stack features for **Talent Compass**, an enterprise employee management platform, using **.NET Core** and **Angular** in an Agile/Scrum environment, delivering user stories end-to-end from API design to responsive UI implementation.
- Designed and implemented **RESTful APIs** and backend services for core employee management modules, with a strong focus on input validation, data consistency, and clean architecture principles.
- Built a **configurable report generation feature** with dynamic SQL filters, enabling stakeholders to export workforce metrics — demonstrating strong backend performance optimisation and query design.
- Leading a **Proof of Concept for a vectorless RAG-based policy chatbot**, evaluating document retrieval strategies and **LLM integration patterns** for enterprise knowledge workflows using **Azure AI services**.
- Leverage **GitHub Copilot** and AI-assisted engineering techniques daily to accelerate feature development, improve code quality, and critically evaluate AI-generated output before integration into production code-bases.
- Collaborated closely with product managers and QA teams to translate business requirements into well-tested, maintainable code, participating in code reviews and upholding team coding standards.

GeekyWolf

Trivandrum

Software Engineer - L2

July 2025 – Jan 2026

- Integrated **Azure Service Bus** to enable reliable asynchronous messaging between microservices, improving system decoupling, fault tolerance, and scalability in an **Event-Driven Architecture**.
- Implemented **document upload and processing** pipelines using **Azure Functions** and **Azure Blob Storage**, delivering secure, scalable serverless file handling with optimised performance for production workloads.
- Led multiple **Proof of Concepts (PoCs)** evaluating technical approaches for new features — including NoSQL storage options, cloud service integrations, and document intelligence tooling — enabling data-driven architectural decisions.
- Managed **CI/CD pipelines** using **Azure DevOps**, overseeing build definitions, release pipelines, and deployment strategies using **Docker** to streamline the delivery lifecycle and maintain high release quality.

GeekyWolf

Trivandrum

Software Engineer - L1

June 2023 – July 2024

- Designed, developed, and maintained **15+ microservices** for ControlQore, a B2B accounting SaaS platform, using **.NET Core (C#)**, following **Test-Driven Development (TDD)** with **xUnit** and clean architecture principles to deliver production-ready, well-tested software.
- Architected and maintained **RESTful APIs** and webhook integrations connecting ControlQore with third-party platforms like **Procore** — demonstrating strong API design and distributed system communication skills relevant to fintech and audit domains.
- Developed responsive front-end features using **Angular**, **TypeScript**, **HTML5**, and **CSS3**, including custom pipes and directives to improve code reusability and UI performance; contributed to React component development for internal tooling.
- Designed and implemented **20+ gRPC services** for high-performance inter-service communication within a **.NET 8** distributed application, improving scalability and reducing API response latency.
- Leveraged **Azure Application Insights** for performance monitoring, exception tracking, and production troubleshooting, ensuring system reliability and rapid resolution of critical issues.

- Optimised **SQL Server** queries and data migration pipelines using **.NET Core**, processing large datasets while maintaining data integrity and application performance.
- Upgraded permission-related **NuGet packages** to strengthen security controls, resulting in a **15% reduction** in development time through improved access control patterns — aligned with OWASP security principles.
- Mentored junior developers through code reviews, pair programming, and knowledge sharing — contributing to technical decision-making and enforcing team coding standards.

Education

Rajiv Gandhi Institute of Technology, Kottayam
B.Tech in Electrical and Electronics Engineering

July 2019 – June 2023

Projects

Event Recovery Tool

- Developed a console application to identify and reprocess failed events by leveraging manually inserted event data, ensuring reliable recovery of incomplete operations in distributed systems.
- Tools Used: .NET, Azure Service Bus, RabbitMQ

Hotel Booking App

- Developed a full-stack hotel booking application with secure authentication, enabling users to browse, book, and manage reservations with a responsive UI and robust backend API.
- Tools Used: .NET, Angular, SQL Server, Git

Skills

Languages: C#, TypeScript, JavaScript, Python, SQL, Bash, HTML5, CSS3, C++

Technologies: .NET 8, ASP.NET Core, Angular, React, MS SQL Server, Azure DevOps, Docker, Git, Azure Functions, Azure Blob Storage, Azure Service Bus, Azure OpenAI, Azure AI Services, Entity Framework

AI & LLM: RAG Pipelines, Prompt Engineering, LLM Integration, GitHub Copilot, Azure OpenAI, AI-Assisted Engineering

Architectures & Patterns: Microservice Architecture, RESTful API Design, Event-Driven Architecture, CQRS, Repository Pattern, Domain-Driven Design, Agile/Scrum

Development Practices: Test-Driven Development (TDD), Unit & Integration Testing (xUnit), CI/CD Pipelines, gRPC, Code Reviews, Performance Optimisation
